EXPERIMENT – 12

AIM

To learn and implement **WHILE and REPEAT loop statements** in MySQL.

Procedure

1. Open MySQL Workbench and connect to the MySQL server.
2. Select the BikeShowroomDB database.
3. Create a stored procedure for the WHILE loop.
4. Execute the procedure and verify its output.
5. Create another stored procedure using the REPEAT loop.
6. Execute the procedure and verify its output.
7. Observe the results in the Result Grid.
8. Take screenshots of the code and output.

QUESTIONS & OUTPUTS :

1. Write a procedure using a WHILE statement to display bike numbers from 1 to 5.
2. Write a procedure using REPEAT to display bike numbers from 1 to 5.

1. Write a procedure using a WHILE statement to display bike numbers from 1 to 5

```
1 • USE BikeShowroomDB;
2
3 DELIMITER //
4
5 • CREATE PROCEDURE bike_while()
6 BEGIN
7     DECLARE x INT DEFAULT 1;
8     DECLARE result_text VARCHAR(100) DEFAULT '';
9
10    WHILE x <= 5 DO
11        SET result_text = CONCAT(result_text, 'Bike ', x, ' ');
12        SET x = x + 1;
13    END WHILE;
14
```

Bike_ID	Bike_Name	Brand	Price	Model_Year	Color	Engine_CC
101	Apache RTR 200	TVS	145000.00	2024	Black	NULL
102	Pulsar NS200	Bajaj	165000.00	2024	Red	NULL
103	Classic 350	Royal Enfield	225000.00	2025	Blue	NULL
104	R15 V4	Yamaha	190000.00	2024	Grey	NULL
*	NULL	NULL	NULL	NULL	NULL	NULL

Result 6 bike_data 7 x

Output

#	Time	Action	Message
1	18:14:41	USE BikeShowroomDB	0 row(s) affected
2	18:14:41	CREATE PROCEDURE bike_while() BEGIN DECLARE x INT DEFAULT 1; DECLARE result_text VARCHAR(100) DEFAULT ''; WHILE x <= 5 D...	0 row(s) affected
3	18:14:41	CALL bike_while()	1 row(s) returned
4	18:14:41	SELECT * FROM bike_data LIMIT 0, 1000	4 row(s) returned

2. Write a procedure using REPEAT to display bike numbers from 1 to 5

```
1 DELIMITER //
2
3 • CREATE PROCEDURE bike_repeat()
4 BEGIN
5     DECLARE x INT DEFAULT 1;
6     DECLARE result_text VARCHAR(100) DEFAULT '';
7
8     REPEAT
9         SET result_text = CONCAT(result_text, 'Bike ', x, ' ');
10        SET x = x + 1;
11    UNTIL x > 5
12    END REPEAT;
13
14 SELECT result_text AS Result;
```

Bike_ID	Bike_Name	Brand	Price	Model_Year	Color	Engine_CC
101	Apache RTR 200	TVS	145000.00	2024	Black	NULL
102	Pulsar NS200	Bajaj	165000.00	2024	Red	NULL
103	Classic 350	Royal Enfield	225000.00	2025	Blue	NULL
104	R15 V4	Yamaha	190000.00	2024	Grey	NULL
*	NULL	NULL	NULL	NULL	NULL	NULL

Result 8 bike_data 9 x

Output

#	Time	Action	Message
1	18:16:09	CREATE PROCEDURE bike_repeat() BEGIN DECLARE x INT DEFAULT 1; DECLARE result_text VARCHAR(100) DEFAULT ''; REPEAT ...	0 row(s) affected
2	18:16:09	CALL bike_repeat()	1 row(s) returned
3	18:16:09	SELECT * FROM bike_data LIMIT 0, 1000	4 row(s) returned

RESULT

Thus, the **WHILE** and **REPEAT** loop programs were executed successfully in MySQL
