EXPERIMENT – 13

AIM

To learn and implement **CASE and LOOP statements** in MySQL.

Procedure

1. Open MySQL Workbench and connect to the MySQL server.
2. Select the BikeShowroomDB database.
3. Create a stored procedure using the CASE statement.
4. Execute the procedure and verify the result.
5. Create a stored procedure using the LOOP statement.
6. Execute the procedure.
7. Verify the output using SELECT.
8. Take screenshots of the SQL code and output.

QUESTIONS & OUTPUTS :

1. **Display the price category of a bike based on its price.**
2. **Write a procedure using LOOP to display bike numbers from 1 to 5.**

1. Display the price category of a bike based on its price

```
1 • USE BikeShowroomDB;
2
3 DELIMITER //
4
5 • CREATE PROCEDURE bike_category(IN p_price DECIMAL(10,2))
6 BEGIN
7     CASE
8         WHEN p_price < 150000 THEN
9             SELECT 'Budget Bike' AS Category;
10        WHEN p_price < 250000 THEN
11            SELECT 'Mid Range Bike' AS Category;
12        ELSE
13            SELECT 'Premium Bike' AS Category;
14    END CASE;
```

Bike_Name	Price
Apache RTR 200	145000.00
Pulsar NS200	165000.00
Classic 350	225000.00
R15 V4	190000.00

Result 10 bike_data 11 × Read Only

Output

Action Output

#	Time	Action	Message
✓ 1	18:20:50	USE BikeShowroomDB	0 row(s) affected
✓ 2	18:20:50	CREATE PROCEDURE bike_category(IN p_price DECIMAL(10,2)) BEGIN CASE WHEN p_price < 150000 THEN SELECT 'Budget Bike' ...	0 row(s) affected
✓ 3	18:20:50	CALL bike_category(225000)	1 row(s) returned
✓ 4	18:20:50	SELECT Bike_Name, Price FROM bike_data LIMIT 0, 1000	4 row(s) returned

2. Write a procedure using LOOP to display bike numbers from 1 to 5

```
1 DELIMITER //
2
3 • CREATE PROCEDURE bike_loop()
4 BEGIN
5     DECLARE x INT DEFAULT 1;
6     DECLARE result_text VARCHAR(100) DEFAULT '';
7
8     loop1: LOOP
9         SET result_text = CONCAT(result_text, 'Bike ', x, ' ');
10
11        SET x = x + 1;
12
13        IF x > 5 THEN
14            LEAVE loop1;
```

Bike_ID	Bike_Name	Brand	Price	Model_Year	Color	Engine_CC
101	Apache RTR 200	TVS	145000.00	2024	Black	NULL
102	Pulsar NS200	Bajaj	165000.00	2024	Red	NULL
103	Classic 350	Royal Enfield	225000.00	2025	Blue	NULL
104	R15 V4	Yamaha	190000.00	2024	Grey	NULL

Result 12 bike_data 13 × Apply Rev

Output

Action Output

#	Time	Action	Message
✓ 1	18:21:29	CREATE PROCEDURE bike_loop() BEGIN DECLARE x INT DEFAULT 1; DECLARE result_text VARCHAR(100) DEFAULT ''; loop1: LOOP ...	0 row(s) affected
✓ 2	18:21:29	CALL bike_loop()	1 row(s) returned
✓ 3	18:21:29	SELECT * FROM bike_data LIMIT 0, 1000	4 row(s) returned

RESULT

Thus, the **CASE** and **LOOP** programming exercises were executed successfully in MySQL
